TENTANG SAYA

I'm a backend- focused fullstack developer who builds real- world web applications for organizations and small businesses.

I've worked on multiple projects including content platforms, ecommerce systems, and school admission systems — focusing on backend development such as API design, database management, and business logic.

I'm comfortable working with Laravel, Node.js, MySQL, and modern frontend tools when needed.

I enjoy solving real problems through code and building systems that are actually used by people.

Currently, I'm improving my skills in system architecture and writing clean, maintainable code.

PENGALAMAN KERJA

PT. ADOC KREATIF SINEMA

Software Engineer | Apr 2026 - Sekarang

Worked as a backend developer for a movie streaming platform with a rental-based system. Responsible for building and maintaining the core backend system, including API development, database management, and business logic implementation.

Key contributions:

- Designed and developed REST APIs for frontend integration
- Implemented authentication system (manual & Google login)
- Built a rental system allowing users to access content for a limited time (24 hours)
- Integrated Midtrans payment gateway for handling transactions - Managed and optimized MySQL database structure
- Developed admin dashboard for content and user management
- Integrated third-party services such as Dacast for video streaming

Focused on building a scalable backend system to support real-world usage.
